Core: Intel 740 66MHz 64bit

Memory: 4 / 8MB SDR / SGR 100MHz 64bit

Year: 1998 **Bus:** AGP 2x

Made: Intel **Links:** [PDF](#) [Wikipedia](#) [OpenGl](#)

Bios: [Here](#)

Variants: Fastware AG240GM - 8MB 89MHz SGR memory

Intel - 4MB 100MHz SGR memory

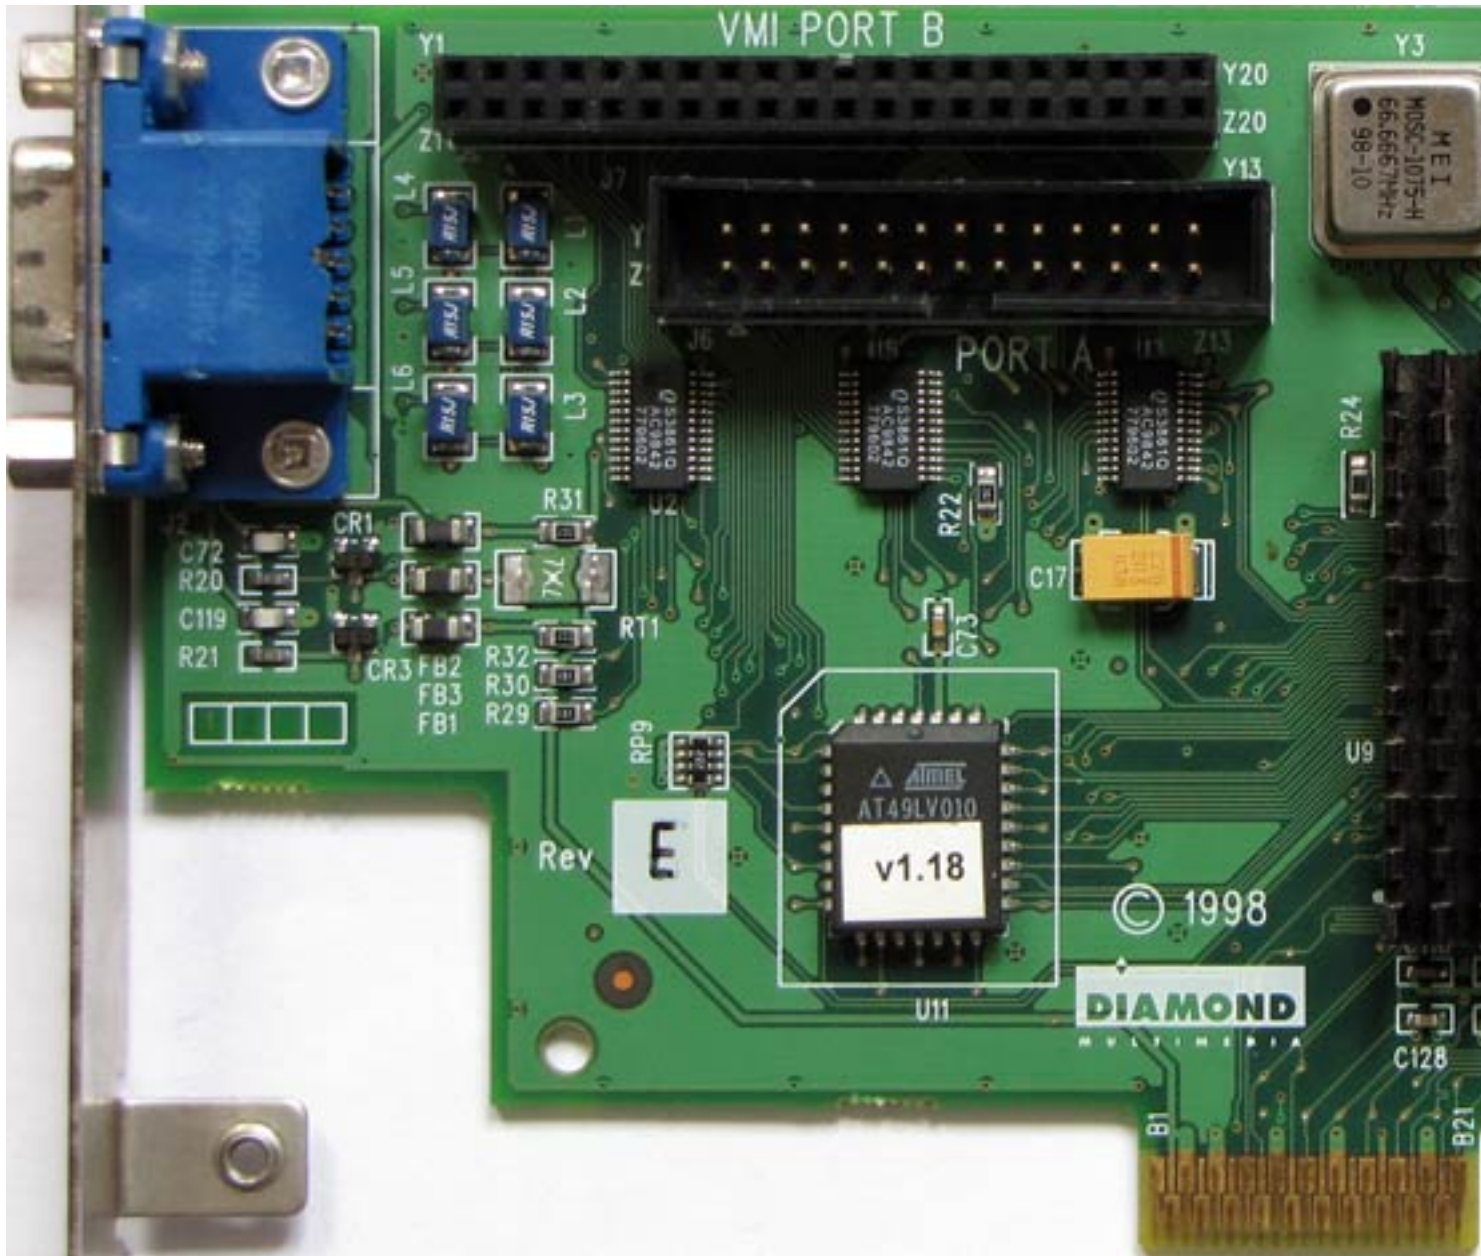

Diamond/Acorp - 8MB 100MHz SDR memory

Gamma Ramp

Gamma Correction

Gamma 1.0

Brightness 0

Contrast 50

Color

All

Red

Green

Blue

Default

Detailed description: This is a software utility window for color calibration. It features a top menu bar with 'Správa barev', 'Color', and 'Version'. The main area is divided into two panels: a color gradient (blue to red) and a 'Gamma Ramp' (a red diagonal line). Below the gradient are 'Reset Bitmap' and 'Load Bitmap' buttons. The 'Gamma Correction' section contains three sliders for Gamma (set to 1.0), Brightness (set to 0), and Contrast (set to 50). To the right, a 'Color' section has radio buttons for 'All' (selected), 'Red', 'Green', and 'Blue'. A 'Default' button is located at the bottom left.
